EDUCATION

Northeastern University, Khoury College, Boston, MA, USA

Master of Science in Artificial Intelligence

CGPA: 4.0/4.0

Coursework: Pattern Recognition & Computer Vision, Machine Learning, Algorithms, Foundations of AI

Birla Institute of Technology and Science Pilani, Pilani, RJ, India

Bachelor of Engineering Honors in Electrical & Electronics Engineering

CGPA: 8.42/10.0

TECHNICAL SKILLS

Languages/Databases: Python, SQL, Spark, C++, Java, Oracle (11g, 12c), MongoDB

Certifications: Azure AI & Data Fundamental, Alteryx Advanced Certified, Deep Learning Specialization (Coursera)

Tools/Skills: AWS Sage maker, S3, EC2, Lambda, EMR, Apache Airflow, Jenkins, Gitlab, Git, Docker, MLOps

Python Libraries: PyTorch, TensorFlow, Scikit-learn, Keras, Torch Vision, Seaborn, Matplotlib, Plotly, Pandas, NumPy, Boto3, h2o, Darts, OpenCV, Hugging Face, Media Pipe, Scikit-Image, Imutils, Pillow, PyTesseract

ML Architectures: Yolo, LeNet-5, Alex Net, VGG-16, ResNet-50, U-Net, Faster R-CNN, Mask R-CNN, Inception Net, Pose Net, SVM, XG Boost, Gradient Boost, Decision Tree, Random Forest, Efficient Net, Fast R-CNN

Specialization: Deep Learning(DL), Computer Vision(CV), Machine Learning(ML), Natural Language Processing(NLP)

WORK EXPERIENCE

Applied AI/ML Co-op | **Sway AI**, MA, US

Jul 2023 - Present

- Optimizing in-house feature insights generation time by **70%** using stratified sampling for multi-time series forecasting.
- Enriched 2% customer acquisition by implementing explainability based on Shapley values for Darts models in 2 months.

Data Scientist | **UBS**, MH, India

Jul 2018 – Mar 2022

- Curtailed manual efforts by **65%** for every release through design and implementation of data-ingestion engine.
- Amplified research article engagement time by **12%** by deploying hybrid recommendation system within 6 months.
- Predicted salesperson ratings with **0.0013 RMSE** based on client relationship management (CRM) data in 4 months.
- Runner up for auto alert system and auto mask for open sensitive document addressing potential **\$2.1B** loss in hackathon.
- Developed salesperson dashboard for global markets division using Alteryx, Tableau, Python processing XML files.
- Amplified campaign reach **27%** in 2 months by devising application to send dynamic custom email using Python, Alteryx.
- Diminished **15%** budget cost by segmenting customers into ROC, GOC, etc. with **92%** accuracy using K-Means clustering.
- Attained **1st** position in 'Artificial Intelligence' category across APAC (Asia Pacific region) at UBS Super Stars.
- Reduced build time by nearly **50%** through completion of build chain automation with internal build chain toolset.

PROJECTS

Image Popularity Anticipation [Kaggle]– [\[Top 5 Finisher\]](#)

Mar 2023 – Mar 2023

- Successfully trained a linear regression model to forecast image download counts using capture details, color distribution and associated keywords, without need for CNN-based image processing. [\[My Kaggle Solution Discussion\]](#)
- Enhanced **12%** performance by removing outliers & normalizing features based on exploratory data analysis of data model.
- Enriched **5%** r2 score through feature engineering & principal component analysis on description, ISO, exposure time, etc.

Store Sales-Prediction [Analytics Vidhya Hackathon] [\[Finalist - 14th\]](#)

Sep 2021 - Sep 2021

- Challenge was building prediction system on sales data of Wow Mart for 18 months from 365 retail stores across 100+ cities.
- Wrangled, standardized data & feature engineered sale data, locations & lagging orders for 29% boost in performance.
- Secured **14th** position in challenge out of 6828 participants by employing XG Boost Regressor. [\[GitHub code\]](#)

Advertisement Campaign analysis

Nov 2021 - Dec 2021

- Curbed nearly **40%** marketing cost by recommending decommissioning 3 Facebook ad campaigns through deep analysis of 9 factors like Unique click through rate (U-CTR), cost per result (CPR), reach, frequency, demographic, etc.
- Suggested techniques for targeted advertisement based on demographic analysis to increase reach by 30%.

Natural Language Inference (NLI)

Apr 2023 – Apr 2023

- Trained RNNs, LSTMs and GRUs with Bag of Words, TF-IDF, word2vec & Glove embeddings as features on SNLI, MNLI data after cleansing, stemming & lemmatization using NLTK, Spacy. Fine-tuned Bi-LSTMs to have **77%** accuracy.
- Improved accuracy to **88%** & F1-score by **11.87%** by transfer learning **BERT** (LLM) model from Hugging face.

Table Tennis ball tracking

Apr 2023 – Apr 2023

- Developed & trained U-net like model to detect the surface of table in PyTorch on 2 A100 GPUs at remote High Performance Research Centre. Transfer trained Yolo to detect table tennis ball and tracked ball direction based on last 9 frames.
- Designed convolutional neural network with 76% accuracy to detect events of bounce, hitting net, game points, etc.
- Enhanced accuracy to **91.2%** by data augmentation, under sampling as events are rare to occur and imbalanced in occurrence.
- Created shot chart through tracking of ball, events using calibrated camera by detected known table with **93%** accuracy.
